

This listing of claims will replace all prior versions and listings of claims in the application.

Listing of claims:

Claims 1-6 (Cancelled)

Claim 7 (New): A device for fastening cable comprising:
a base having a carrier part for holding the cable;
a first connecting unit comprising a sleeve connected to the carrier part; and
a second connecting unit comprising a guide part connected to the carrier part and a holding part releasably engageable with the guide part;
wherein the guide part includes an outer sleeve that defines a guide cavity for receiving the holding part, the guide cavity having a cross section that is longer in the longitudinal direction than in the transverse direction;
wherein the holding part includes an inner sleeve having a smaller diameter than the diameter of the outer sleeve, the inner sleeve including at least one engagement element that engages at least one engagement element on the outer sleeve to fasten the cable to the carrier part.

Claim 8 (New): The device of claim 7 wherein the at least one engagement element on the inner sleeve comprises a plurality of engagement elements and the at least one engagement element on the outer sleeve comprises a plurality of engagement elements.

Claim 9 (New): The device of claim 8 wherein the engagement elements on the outer sleeve are formed by guide recesses that extend in the longitudinal direction and the engagement elements on the inner sleeve are formed by guide projections that extend in the longitudinal direction.

Claim 10 (New): The device of claim 9 wherein the guide projections are configured on walls of the guide part and the guide recesses are configured on walls of the holding part.

Claim 11 (New): The device of claim 10 wherein the guide projections exhibit a triangular cross section, whereby the leading edge of the projection is more steeply angled than the trailing edge of the projection during engagement with the inner sleeve.

Claim 12 (New): The device of claim 7 wherein the holding part surrounds a continuous holding channel and is configured with inward pointing latching lugs.

Claim 13 (New): The device of claim 7 wherein the first connecting unit is configured in accordance with the second connecting unit, and exhibits a displaceable holding part, whereby the longitudinal direction of the holding part of the first connecting unit is parallel to the longitudinal direction of the holding part of the second connecting unit.

Claim 14 (New): The device of claim 7, wherein the holding part and guide part cooperate to adapt to positional and dimensional errors in the second connecting unit.
